Bank Marketing Campaign Analytics

Marketing portfolio project | Campaign KPI, segmentation, propensity scoring, ROI

Business Question

How should a marketing team prioritize direct marketing outreach to improve conversion efficiency and campaign ROI?

Dataset and Scope

UCI Bank Marketing dataset with 41,188 campaign contacts and 4,640 conversions. Outcome is whether the client subscribed to a term deposit.

Method

Built campaign KPIs, segment conversion tables, contact-method analysis, contact-frequency diagnostics, and a logistic-regression propensity model excluding call duration to avoid leakage.

Key Findings

Overall conversion rate is 11.3%. The highest-converting job segment is student at 31.4%. The strongest contact method is cellular at 14.7%. Top propensity decile converts at 49.2%.

Recommendation

Prioritize high-propensity deciles for outbound campaigns, suppress over-contacted low-response audiences, and shift more budget toward segments and contact methods with stronger conversion efficiency.

Portfolio Deliverables

Dashboard PDF, SQL code bundle, one-page summary PDF, and resume project description.
